Python to rename file in a folder occurring to a tab separated settings file.

`rename_files.py`

```
#!/usr/bin/python2

import os

zFile = open('rename_from_to.txt')
zLines = zFile.readlines()
zFileMap = {}
for currentLine in zLines:
    zFileSettings = currentLine.split("\t")
    zOldFileName = zFileSettings[0]
    zFileMap[zOldFileName] = zFileSettings[1].strip()
#    print zOldFileName, zFileSettings[1]

zDir = "D:\\\\ses\\\\nasser-al-qatami\\"
for zFile in os.listdir(zDir):
    zOldFileName, zFileExtension = os.path.splitext(zFile)
    zNewFileName = zFileMap[zOldFileName]
    zOldFilePath = zDir + zOldFileName + zFileExtension
    zNewFilePath = zDir + zNewFileName + zFileExtension
    print zOldFilePath, zNewFilePath
    os.rename(zOldFilePath, zNewFilePath)
```
